Military Status: Completed

Junior Full Stack Developer | MERN STACK

Personal Statement

Full-Stack Developer with a strong foundation in the MERN stack and a problem-solving mindset shaped by an engineering background. I approach software development with a focus on building well-structured, scalable, and maintainable applications, combining technical precision with an understanding of the bigger picture also I got hands on experience at Next.js for UI and Nest.js for backend. Beyond writing code, I value understanding the reasoning behind architectural decisions, creating meaningful experiences and delivering reliable solutions.

Education

Bachelor's Degree in Mechatronics Engineering at German University in Cairo (GUC).

Graduated in 2023 with Grade **good**

Projects

- **Personal Portfolio Web Application** Live Git hub
  - Developed a full-stack portfolio with React, Express, mongoose and MongoDB Atlas. Supports light and dark themes using Context API.
  - Reusable components are shared across different sections of the application to reduce code duplication and maintain a consistent UI.
  - All API communication is centralized through an Axios-based service layer combined with a set of custom hooks for modularity.
  - Organized backend using MVC architecture with API integration for data fetching and form validation combined with responsive design.
- **E-Commerce Web Application** Git hub
  - Developed a fully functional E-commerce platform using MERN Stack. Supporting global state management using redux toolkit.
  - Real-time notifications for order status using Web Sockets using Socket.io and Securing contact and checkout forms with validation and API integration.
  - RESTful API with Express.js handling models for products, users, orders, and cart using Atlas MongoDB.
- **Food-Delivery Web Application** Git hub
  - A food delivery app built with the MERN stack follows an MVC architecture where Express and MongoDB handles data and logic, React manages the UI, and controllers connect both sides.
  - Application allows users to browse different food items and different categories with ease and great user experience and tracking their orders status.
  - Implementing an admin dashboard that allows admin to securely add, edit or remove food items and track the orders status.
  - Integrated Stripe payment gateway into the backend to handle secure transactions, payment sessions and payment processing.

Skills

Technical Skills

Front-End: HTML5, CSS3, JavaScript, React, React-router, Next.js, Typescript, Context API, Redux, Axios, Bootstrap, Tailwind CSS.
Back-End: Node.js, Express.js, Nest-JS, Web sockets, Socket.IO, RESTful APIs, GraphQL, JWT, Bcrypt, RabbitMQ, CORs, Zod, CDN.
Testing & Performance: Web vitals, New Relic, J-meter, Postman, Thunder, Selenium.
Databases: SQL, NoSQL, MongoDB, PostgreSQL, Mongoose, Sequelize.
Tools & Workflow: SDLC, ACID, SOLID, MVC, OOP, Agile, SDKs, Docker, Git, Git hub, Render, Netlify, Nginx.

Soft Skills

- **Attention to Detail:** Maintaining code quality for ensuring reliable functionality and a smooth user experience.
- **Time Management:** Prioritizing development tasks, managing multiple features, and meeting project deadlines efficiently.
- **Problem-Solving:** analyzing technical challenges for implementing effective and maintainable solutions.
- **Adaptability**: quickly learning new technologies, frameworks and development practices to adapt to evolving project requirements.
- **Teamwork:** Sharing ideas, exchanging feedback and working towards shared goals.

Certifications and Courses

- **Full Stack Diploma MERN (**EDGES ACADEMY**)**
- **Full Stack Diploma MEAN (**NTI Creativa GRADUATE**)**
- **Testing Diploma (**EDGES ACADEMY**)**

Languages

- Arabic: Native
- English: Fluent
- German: Good
